

A TOPIARY | **Illustrations**

## Disc and Funnel

*A Disc ejects from the Maker and after a few hours grows into a Funnel.*

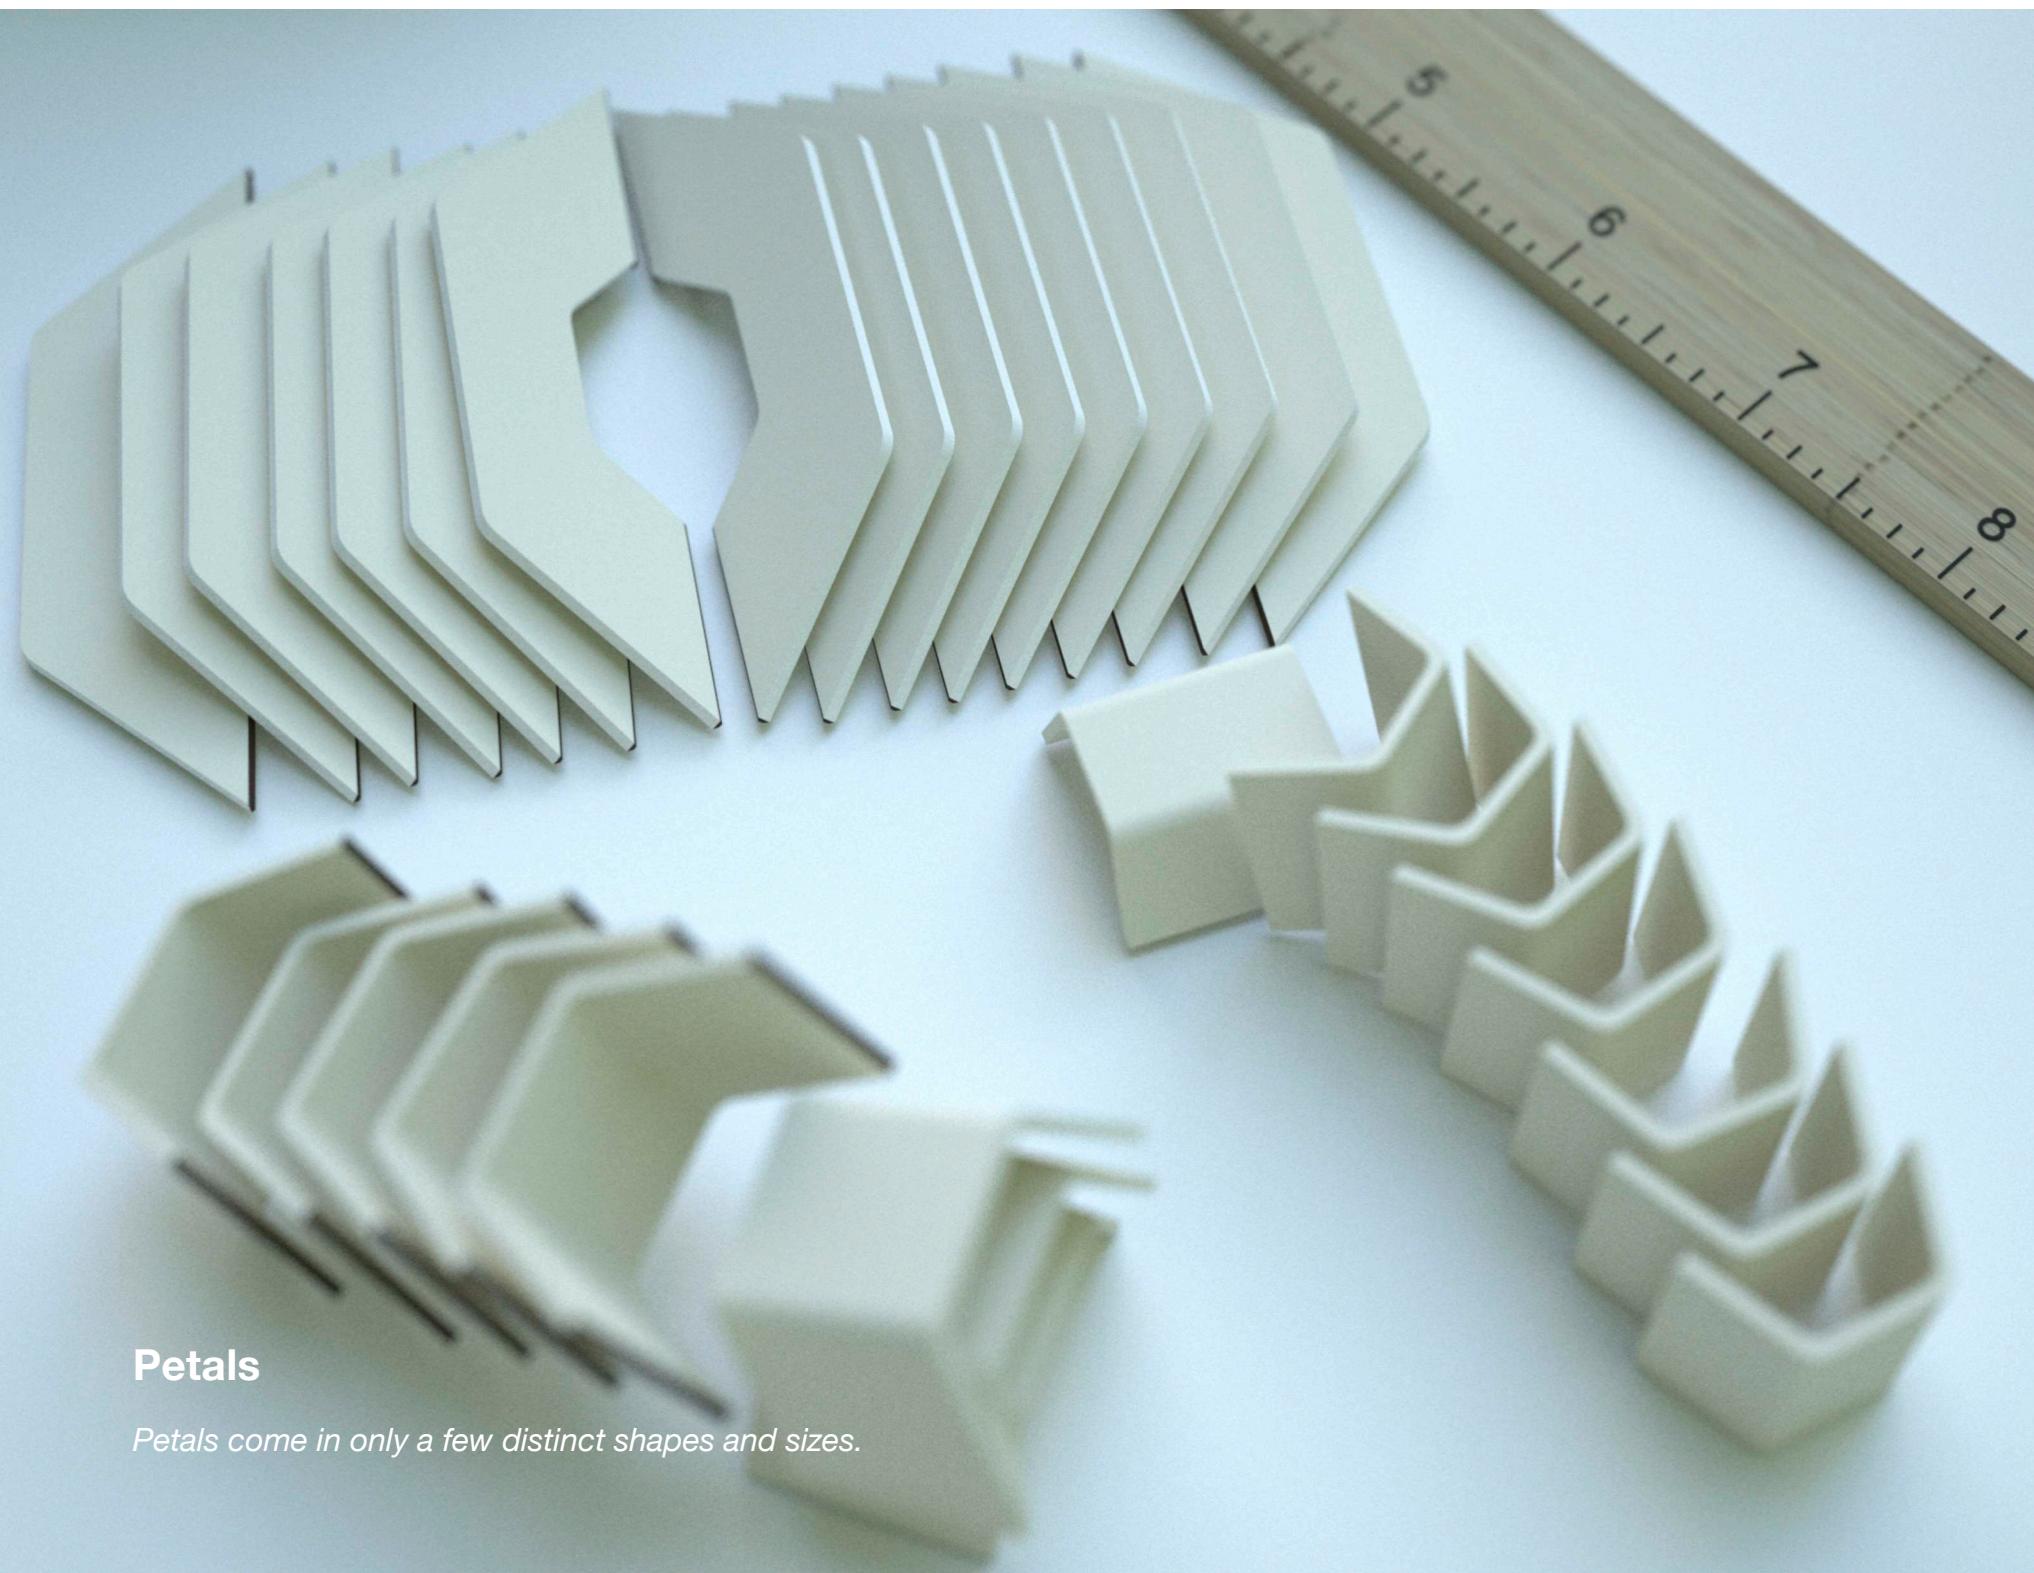

## Funnel Stack

*Funnels can be fit together to form a tower. This launches into the air when its Controller Disc is brought near.*

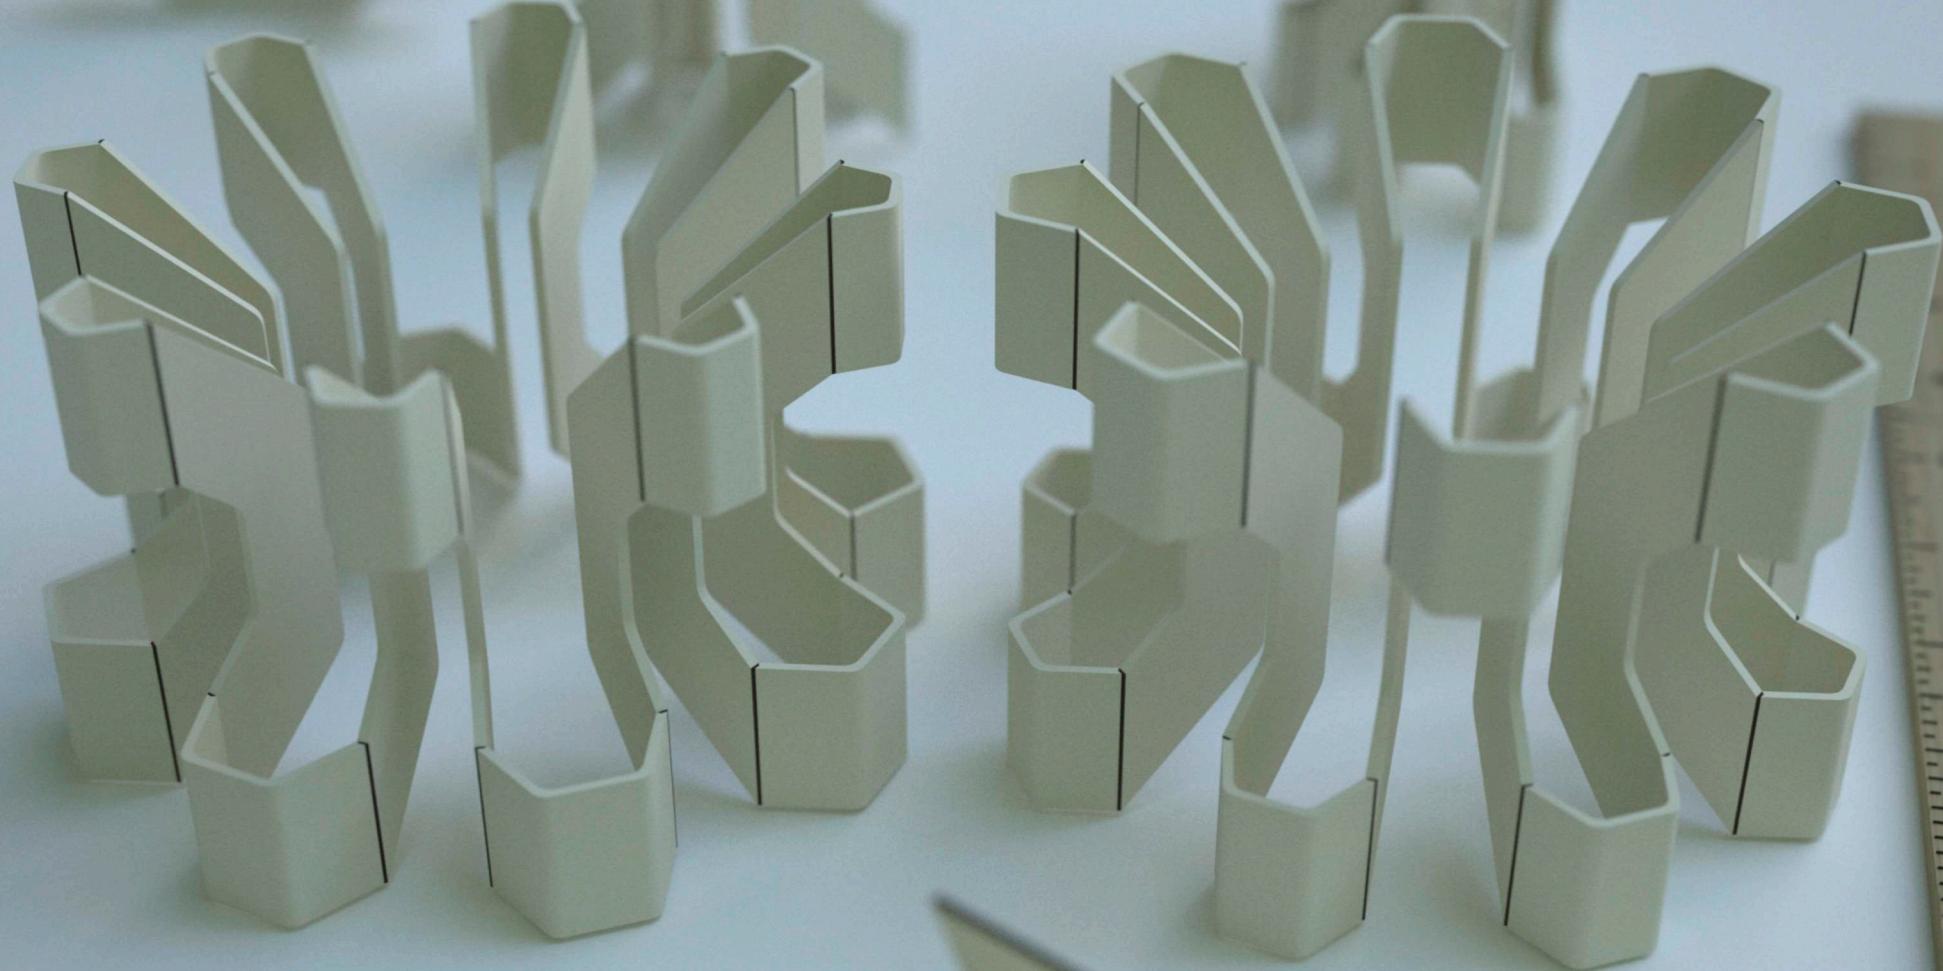

## Decayed Funnels

*Funnels decay after several launches. Petals can be found suspended in the remaining detritus.*

## Petals

*Petals come in only a few distinct shapes and sizes.*

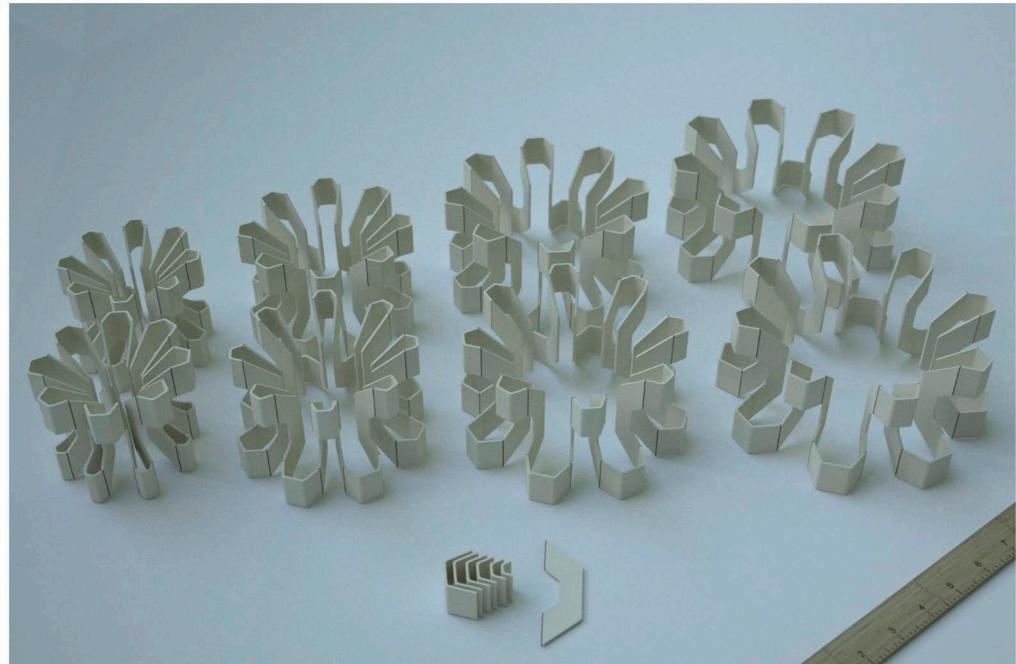

## Flowers

*Flowers, assembled from Petals, can be either odd (having different sized pieces on top than on bottom) or even.*

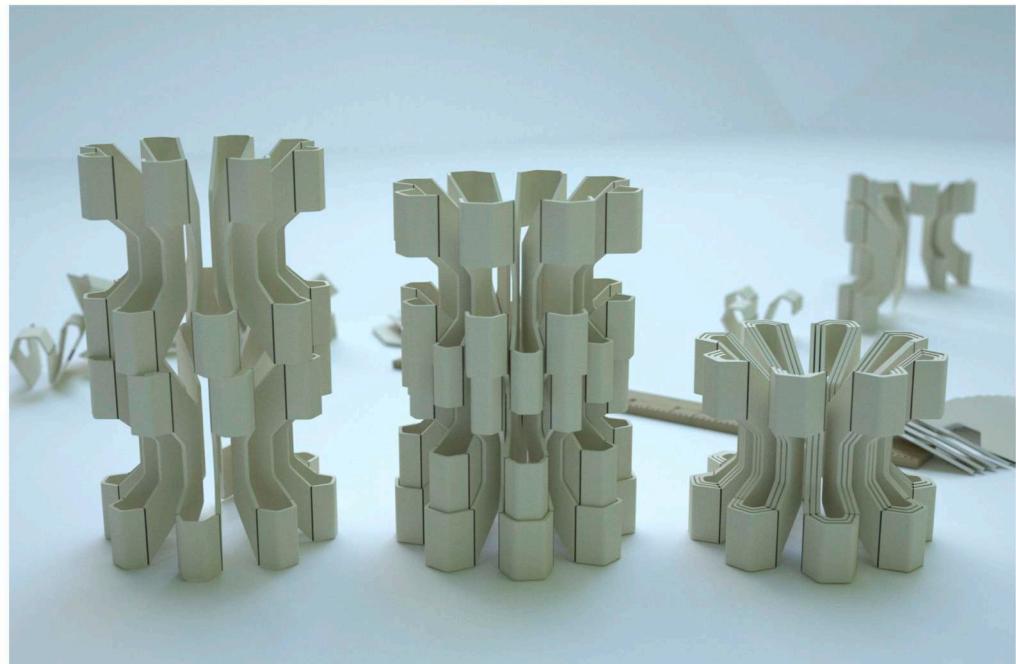

## Flower Size

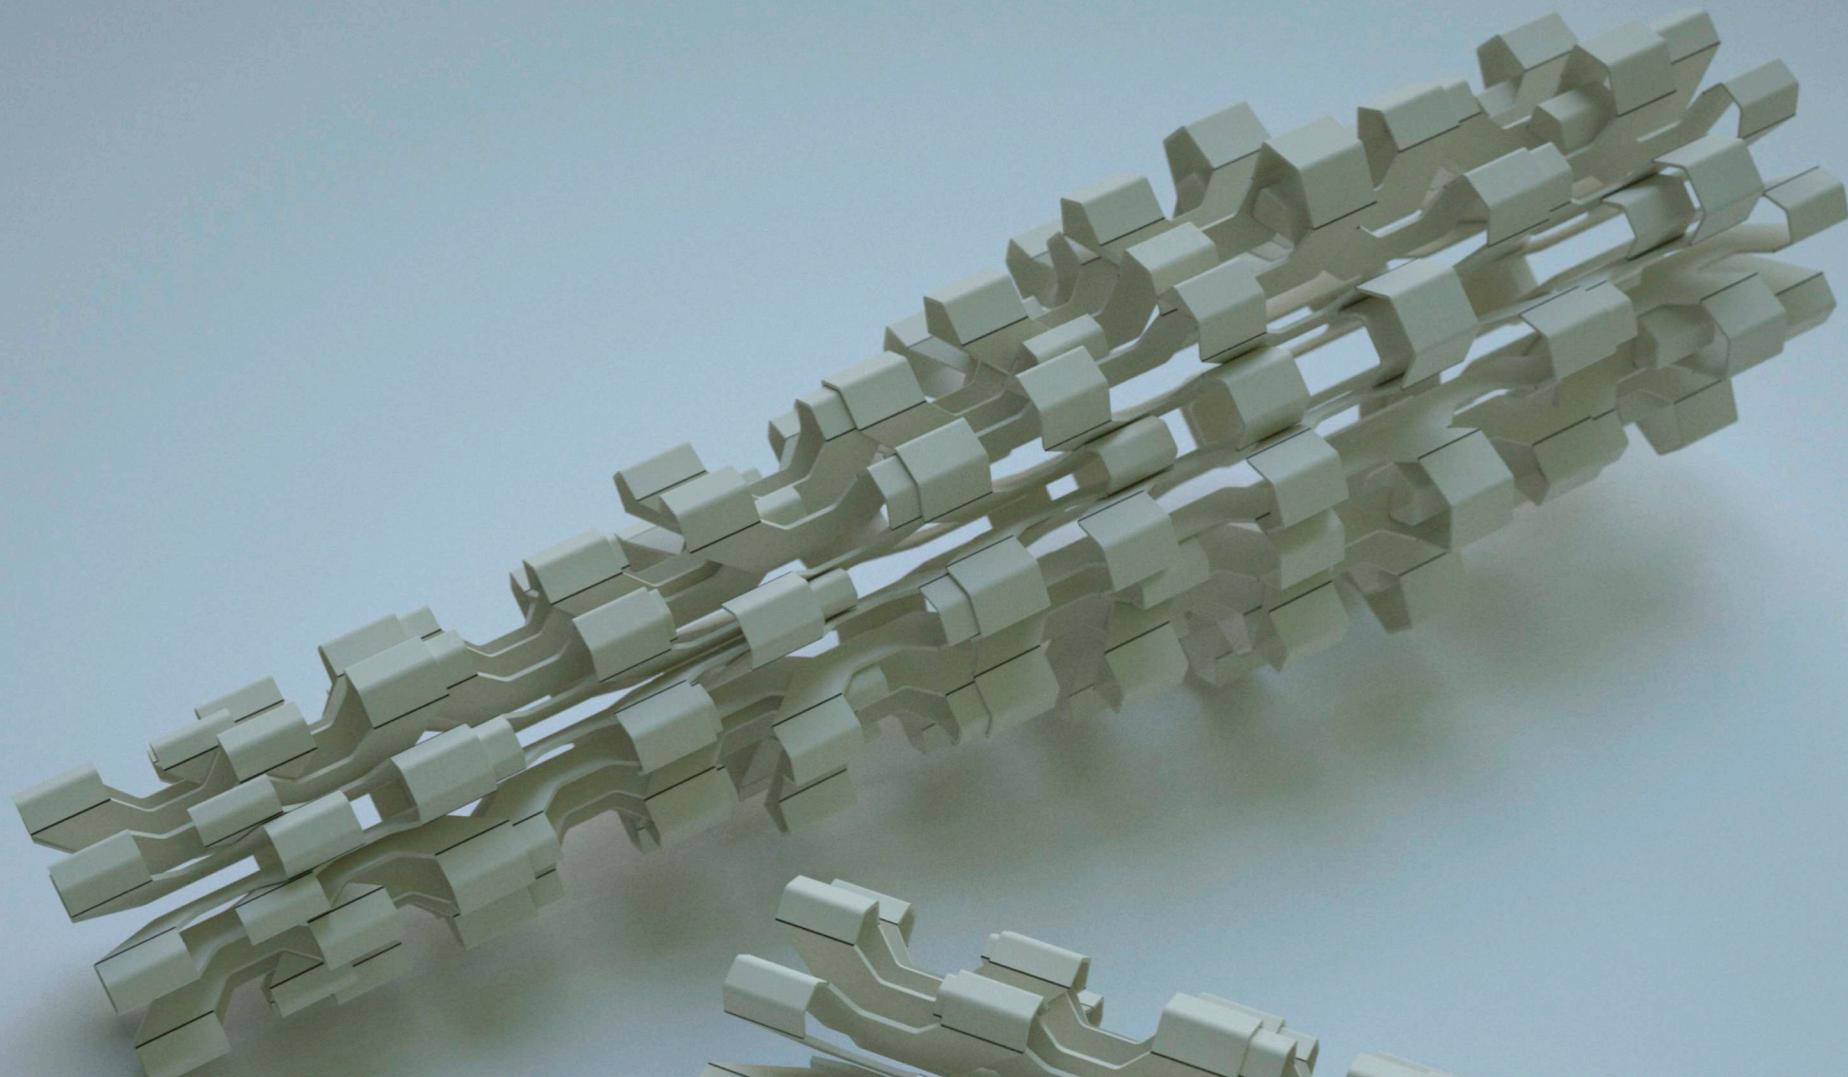

*The size of the Petal dictates the diameter of the resulting Flower.*

## Flower Movement

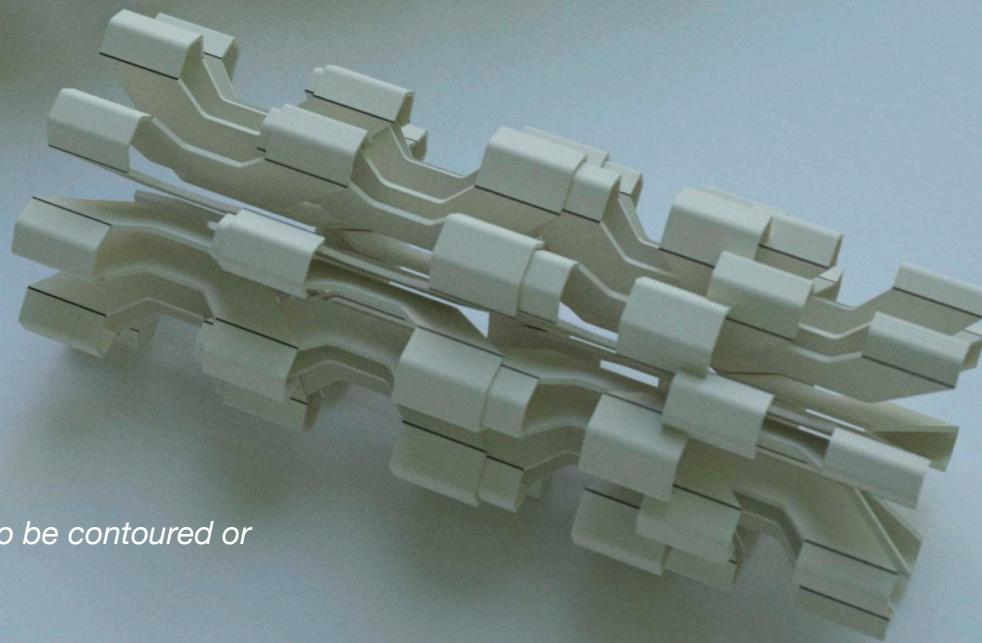

*Flowers can spin in relation to each other, slide up and down like pistons, or collapse entirely.*

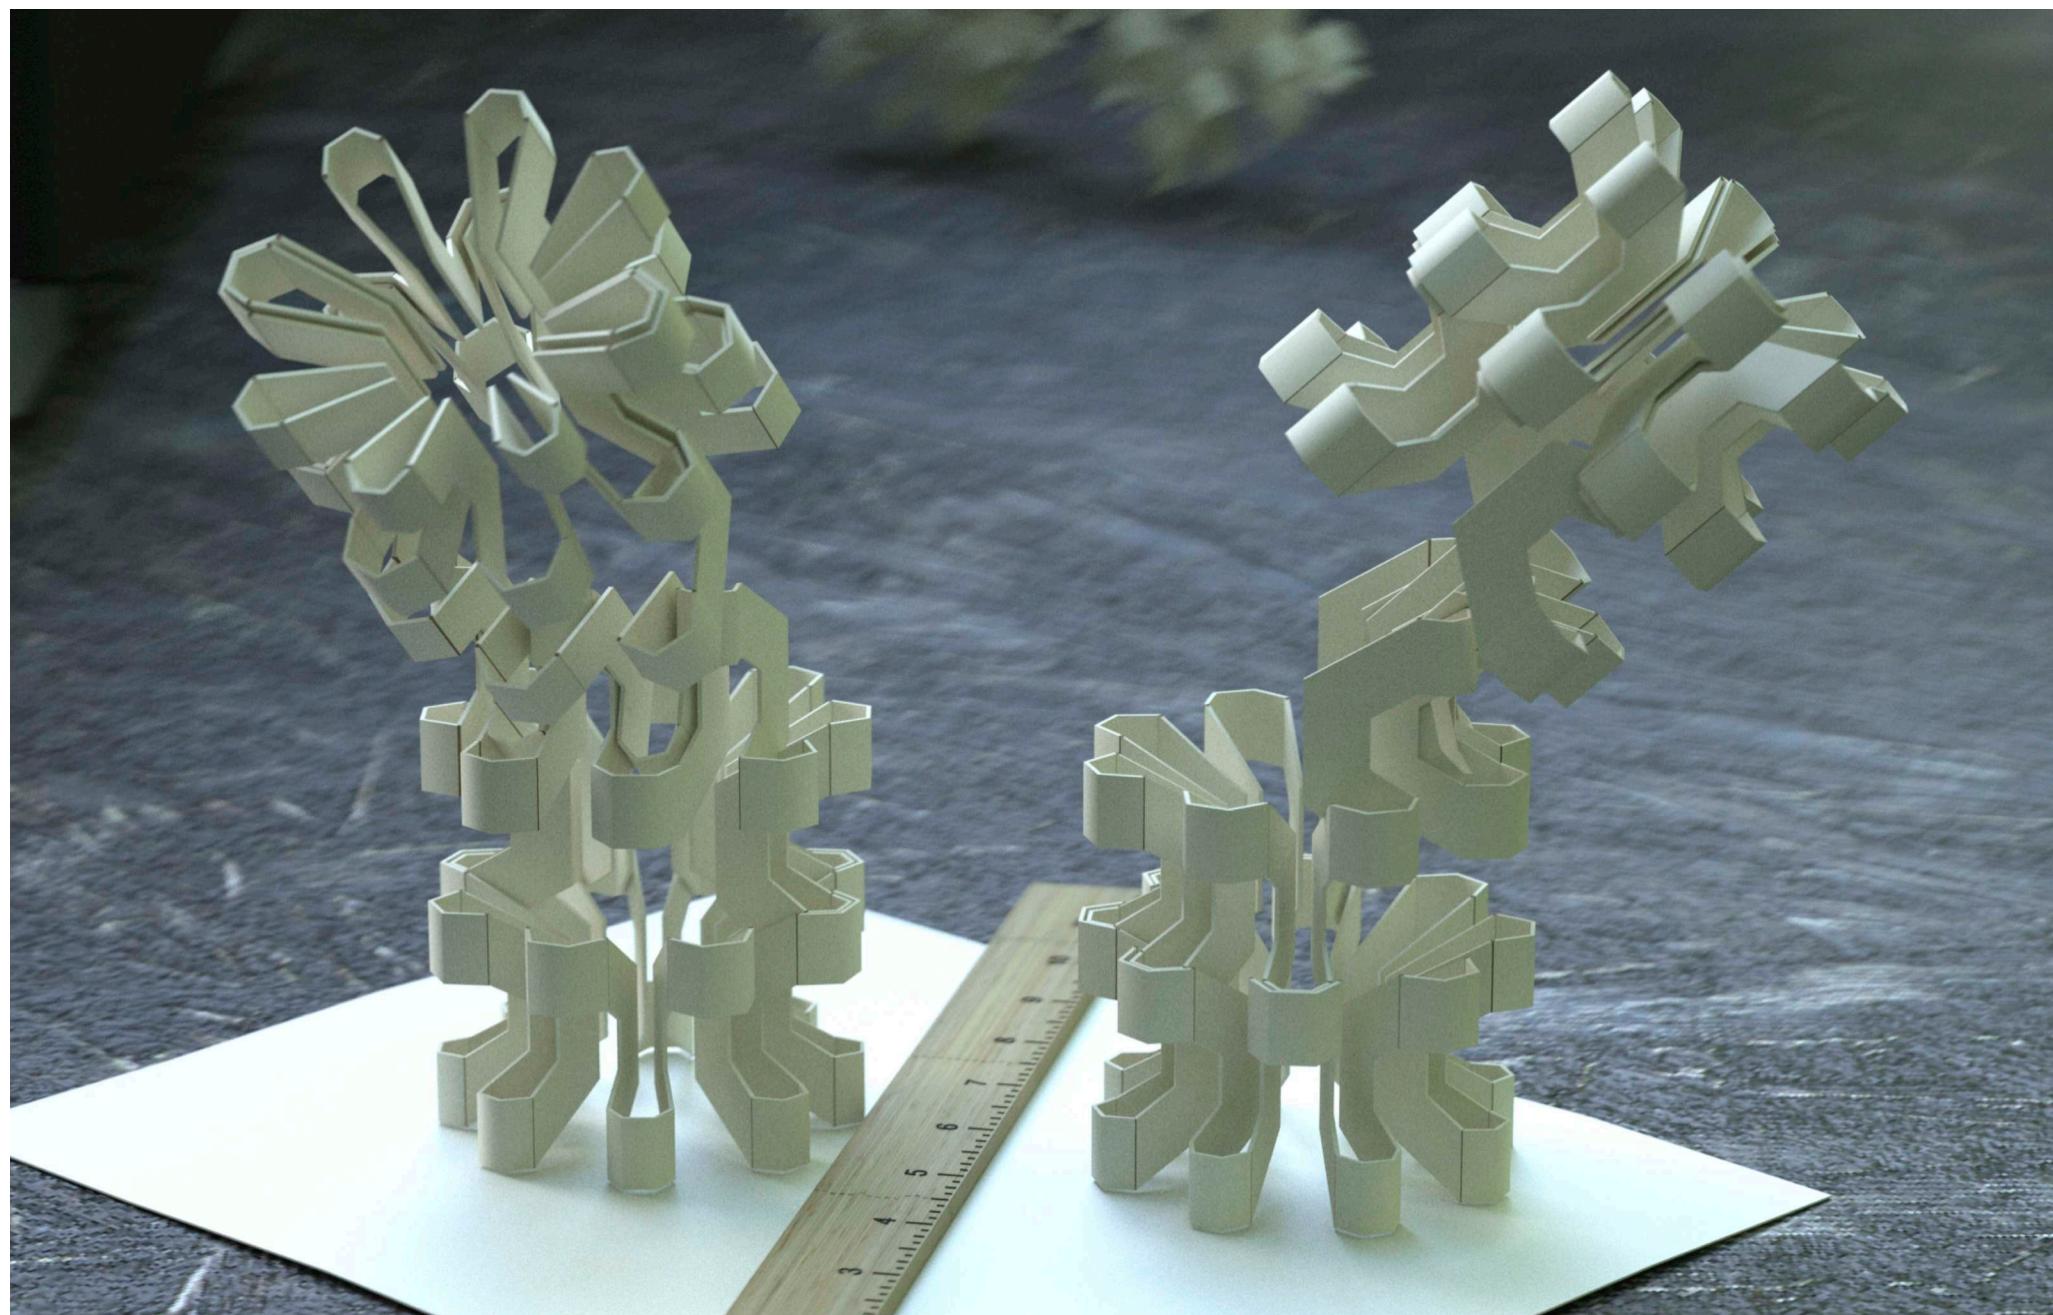

## Flower Limbs

*Different Flower diameters allow Limbs to be contoured or straight.*

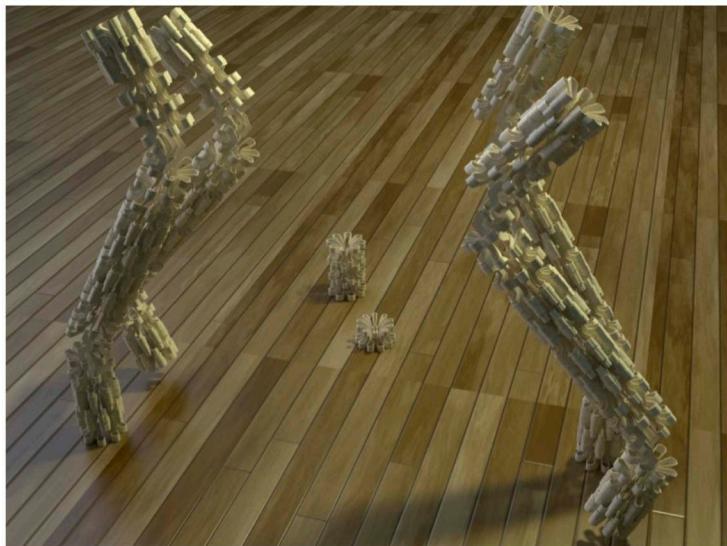

## Knee Assemblies

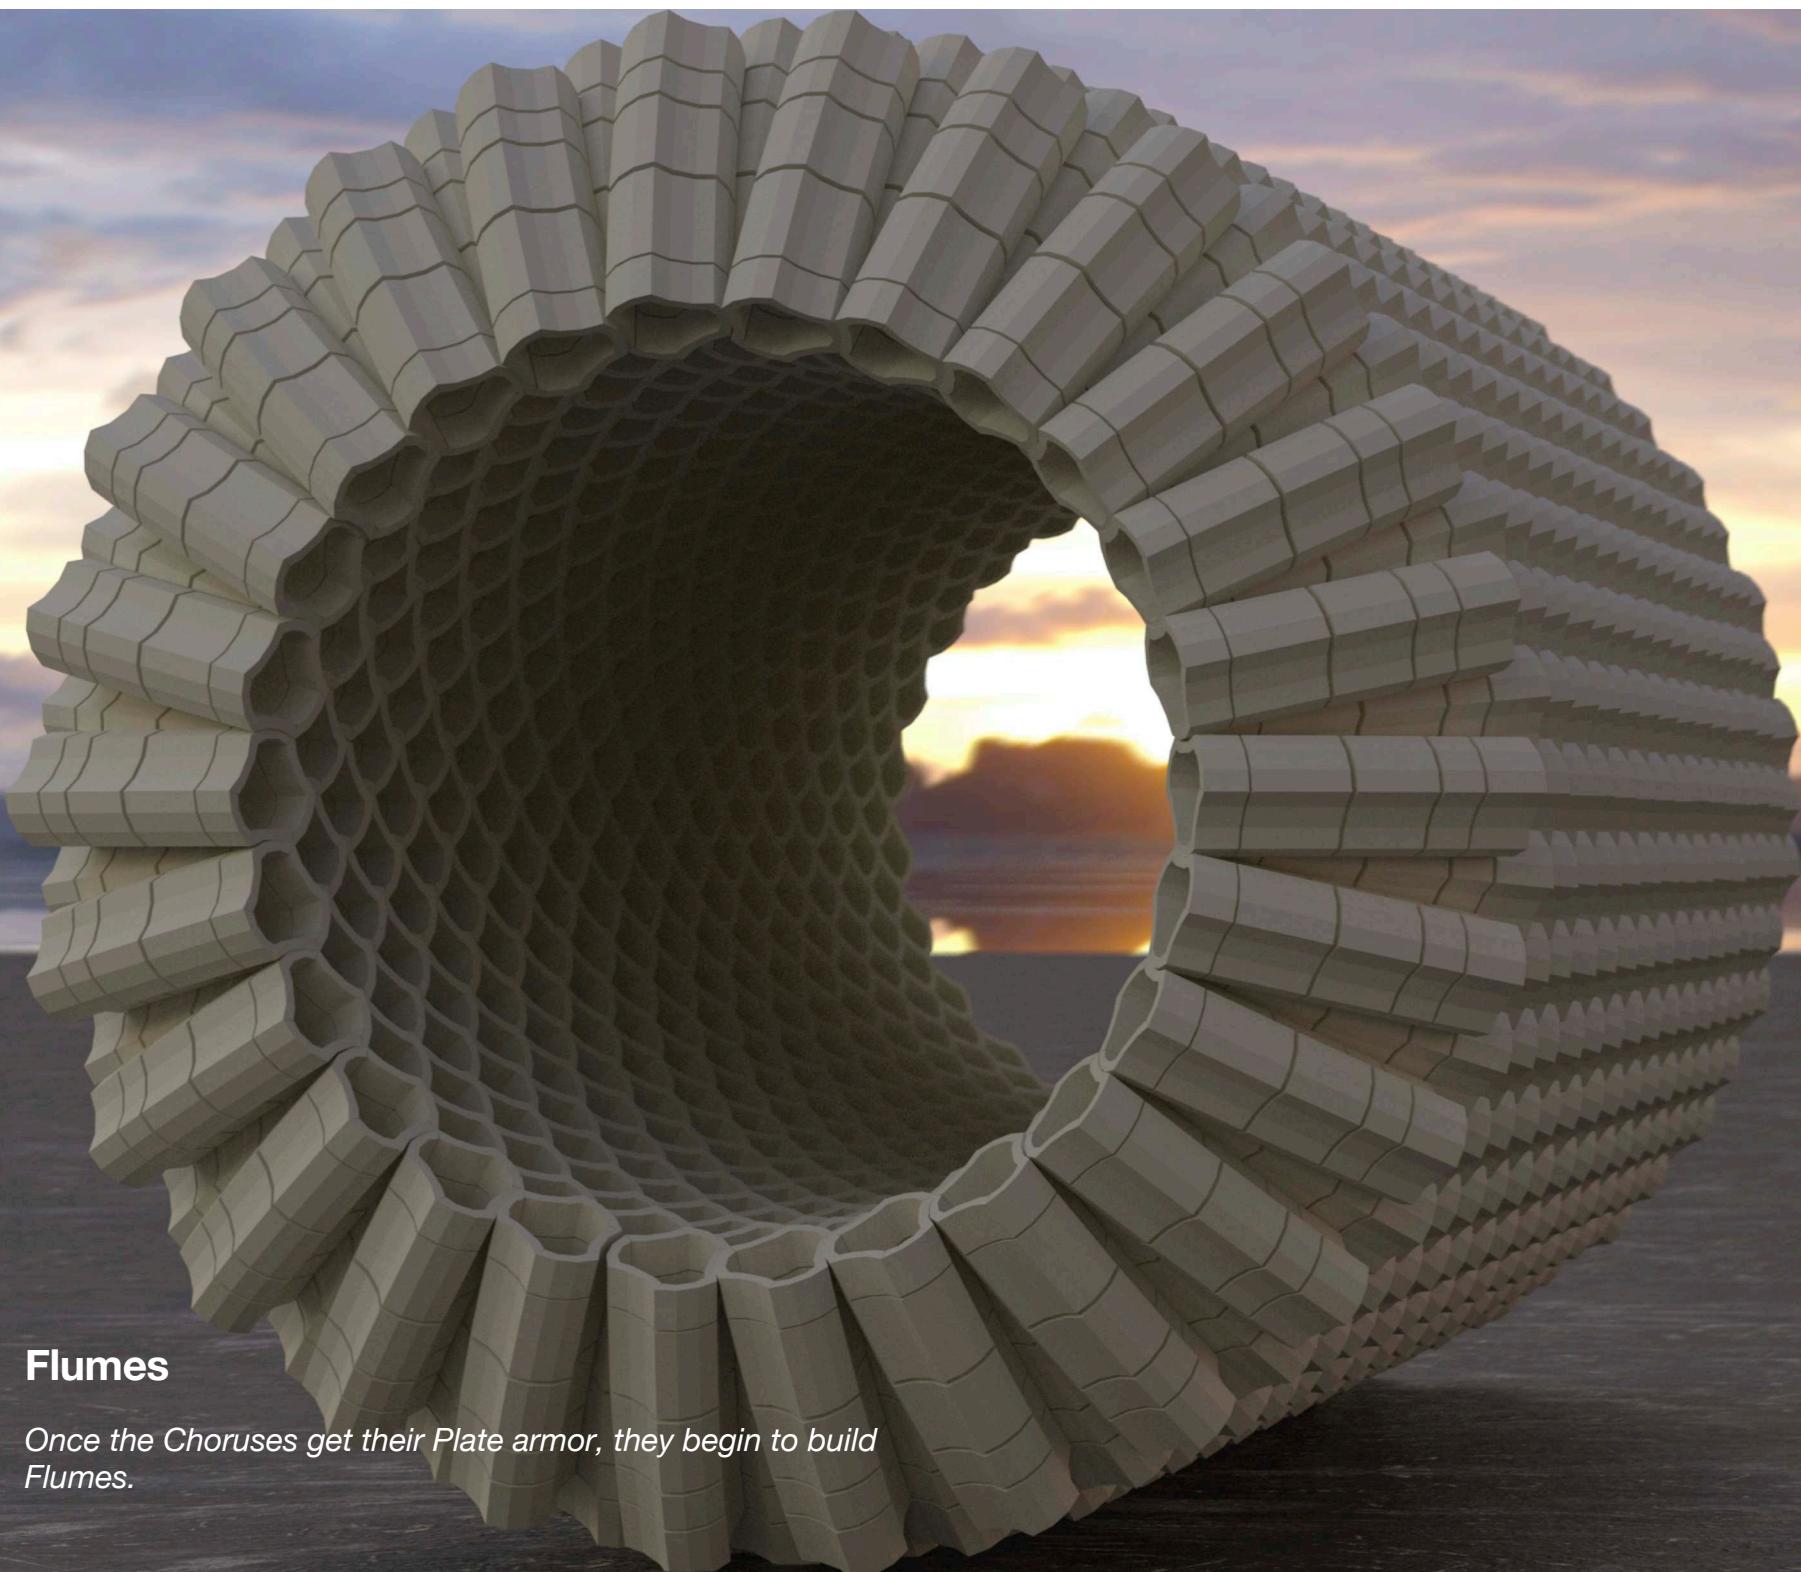

*Reconfiguring the Petals into joints enables the Limbs to bend.*

## Choruses

*The first Choruses are simply Limbs, trained to move like dog legs, attached to wooden boxes.*

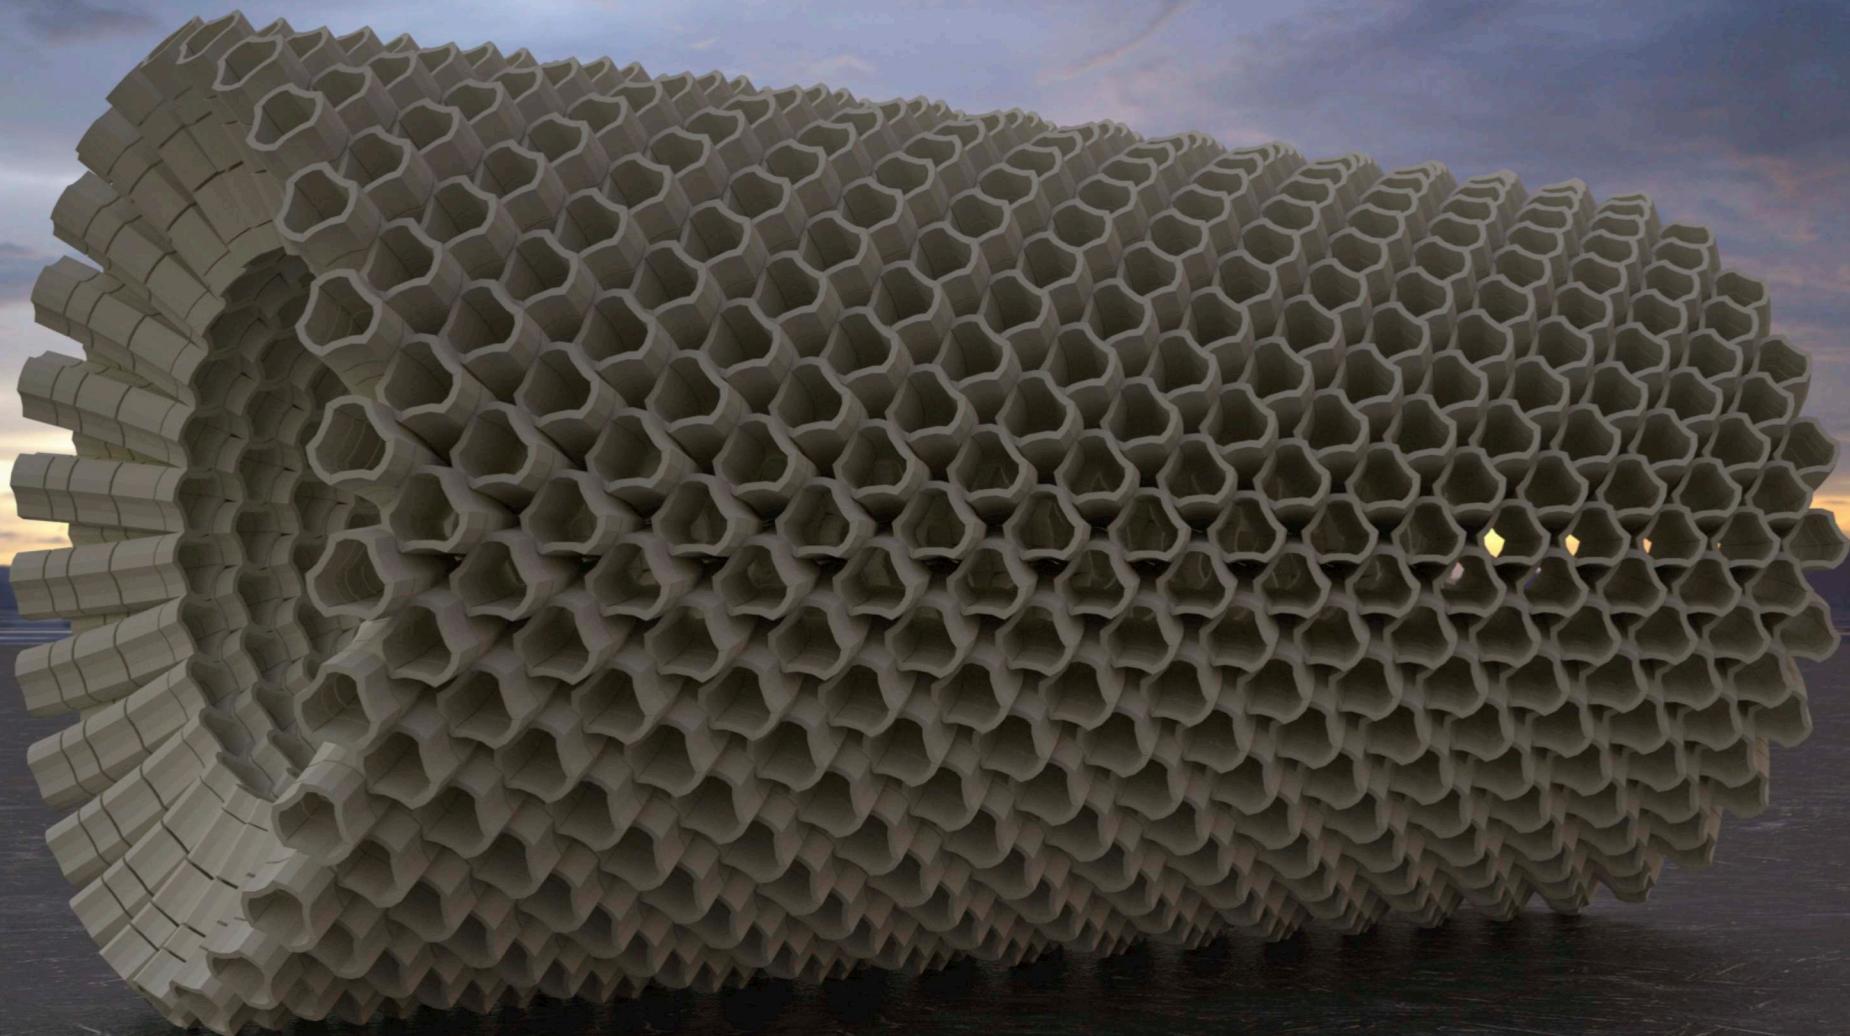

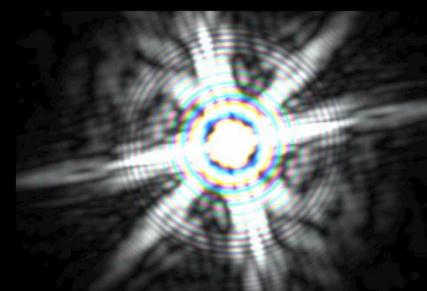

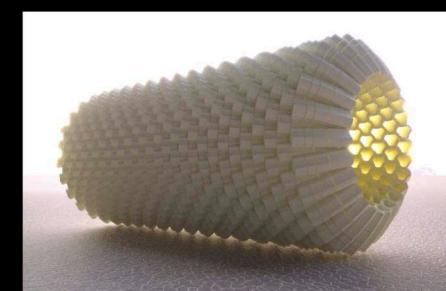

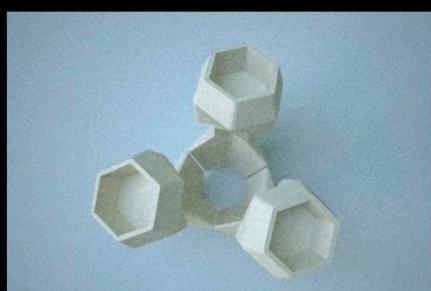

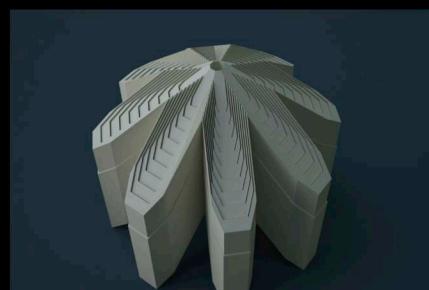

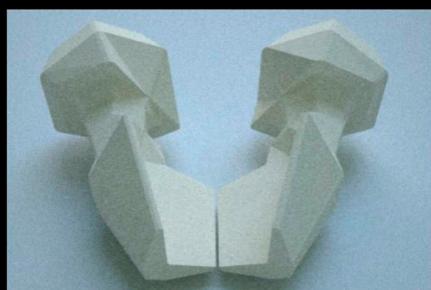

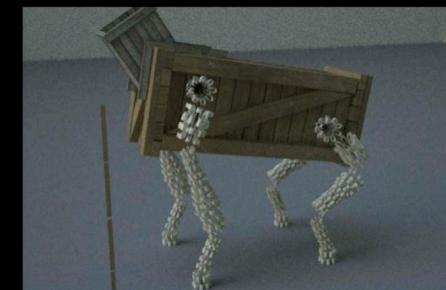

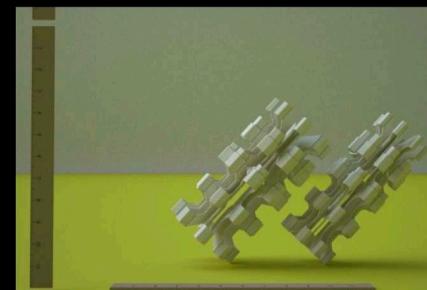

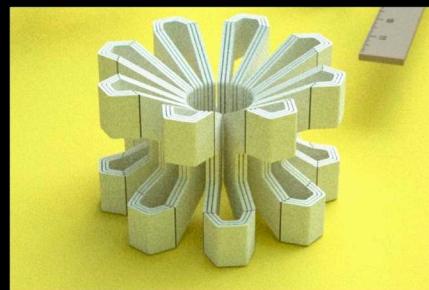

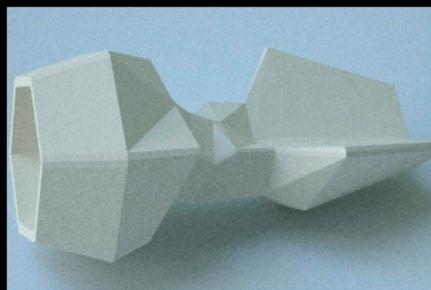

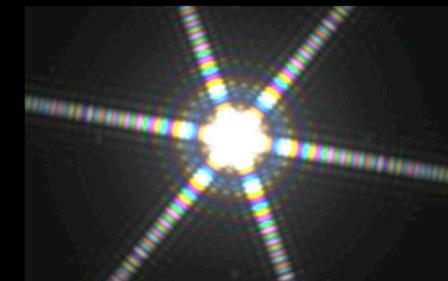

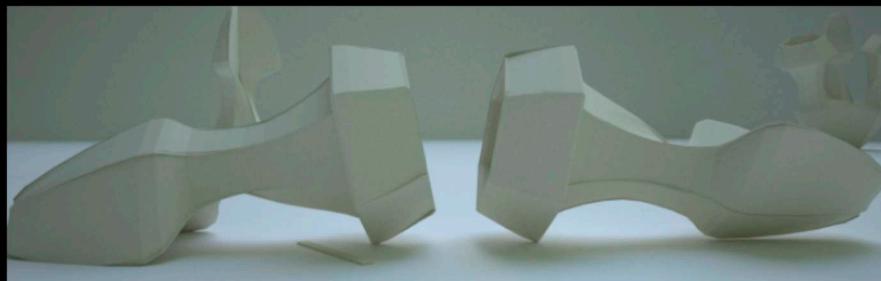

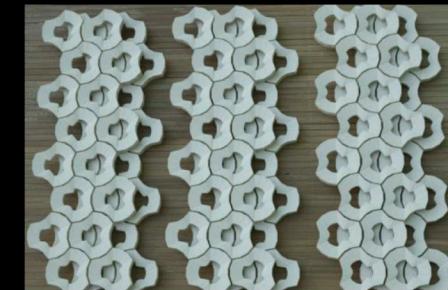

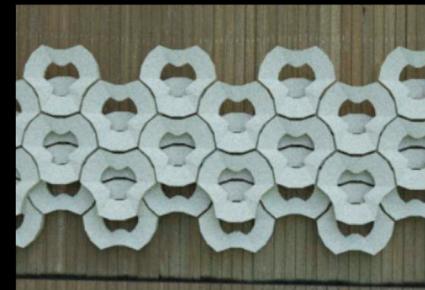

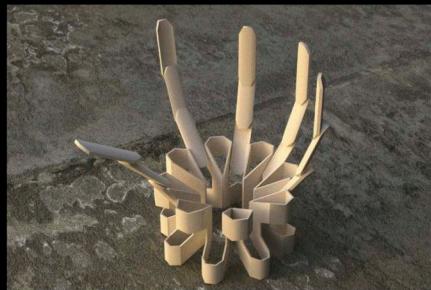

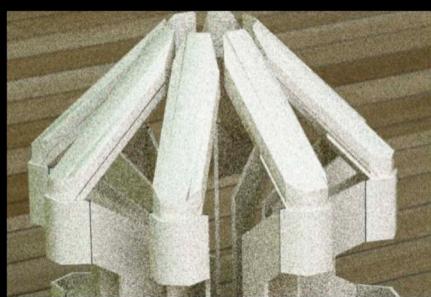

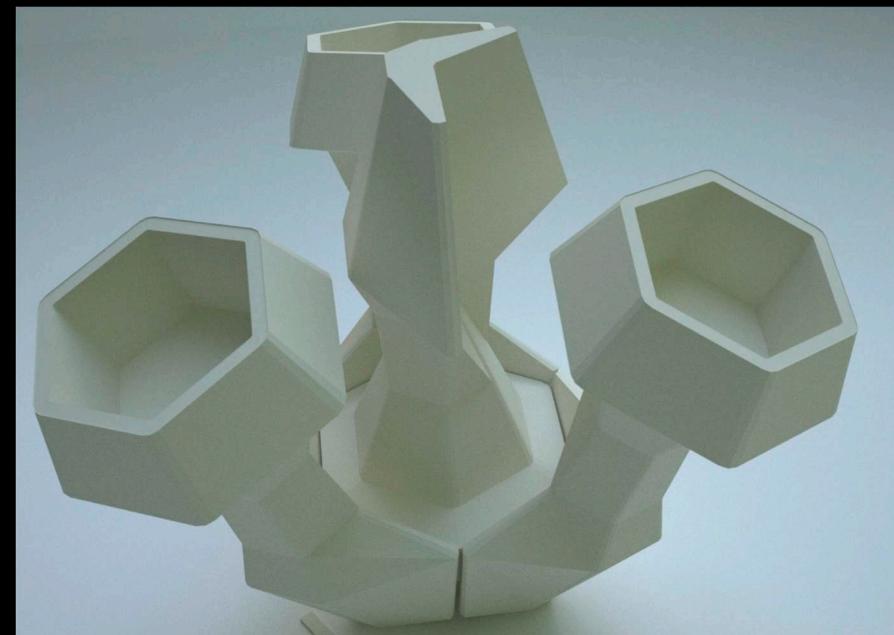

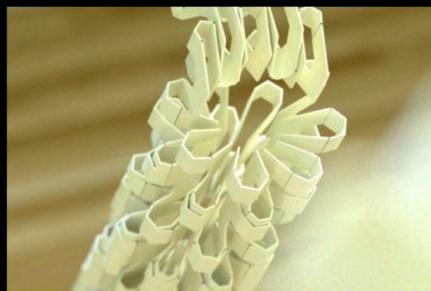

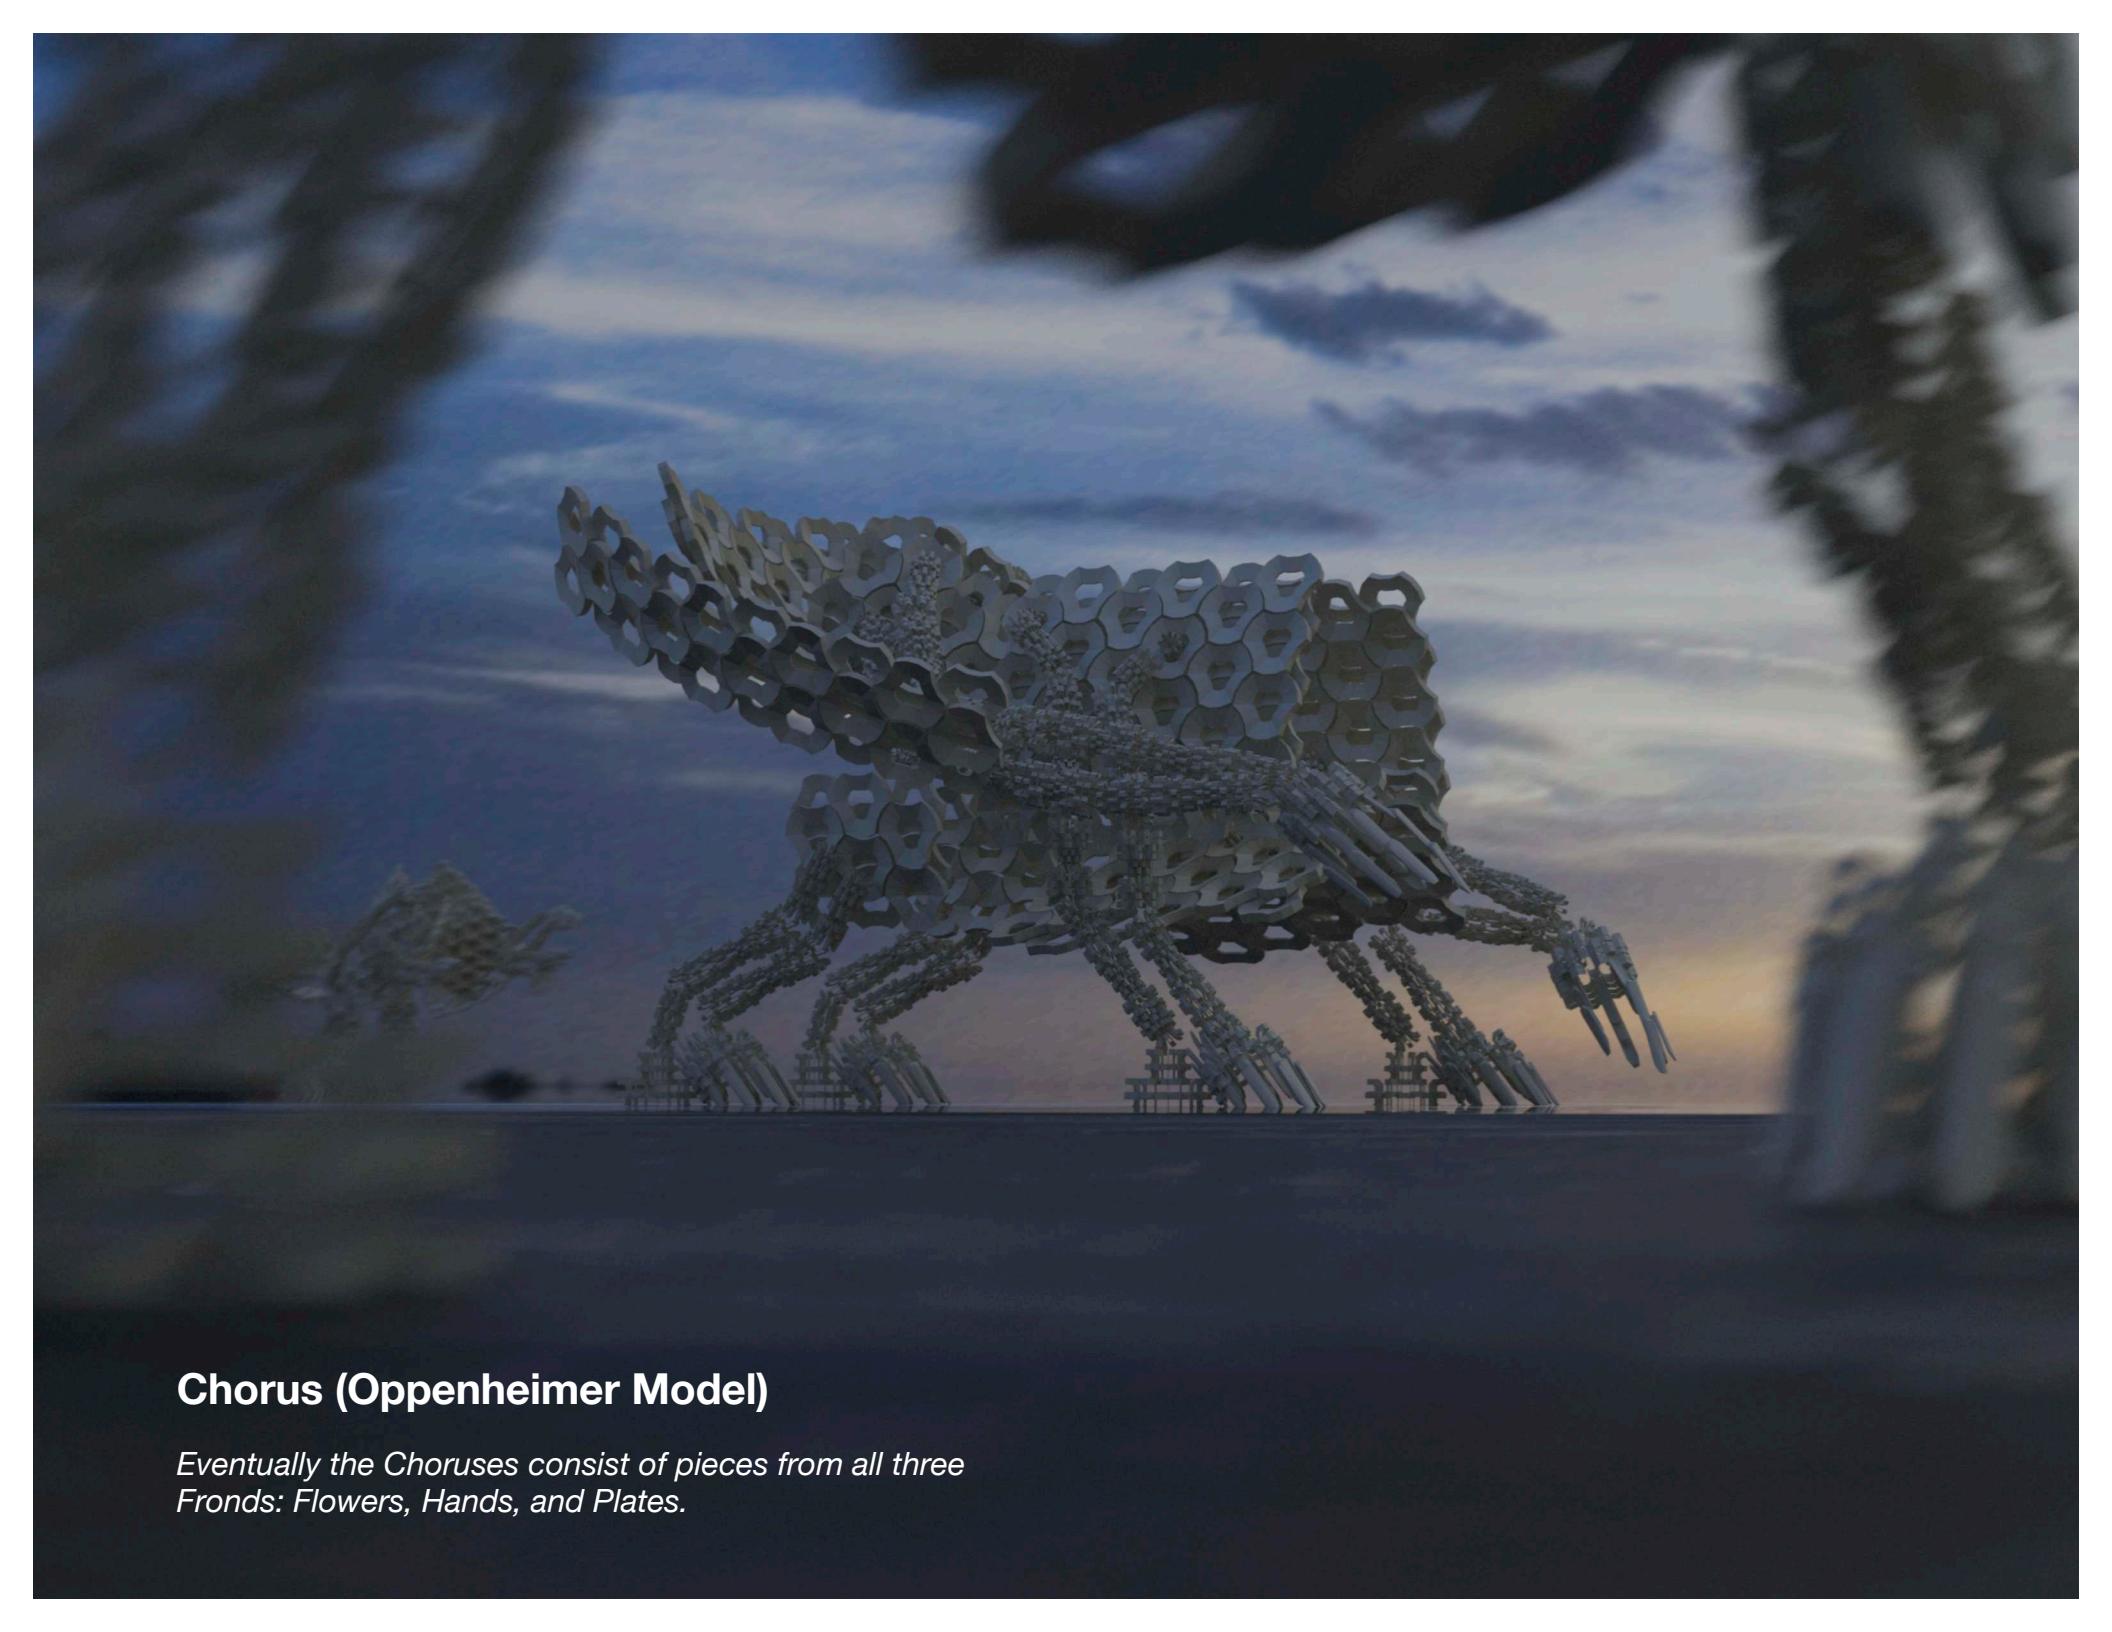

## Flumes

*Once the Choruses get their Plate armor, they begin to build Flumes.*

## Chorus (Oppenheimer Model)

*Eventually the Choruses consist of pieces from all three Fronds: Flowers, Hands, and Plates.*

## Chorus (Oppenheimer Model)

*At seven feet tall, it provides room for the kids to ride inside.*
